About This Report

Scope

This report forecasts to 2023 corrugated box demand and shipments in square meters, and containerboard for corrugated boxes demand and shipments in metric tons in Canada.

Total corrugated box demand is segmented by market in terms of:

- food and beverage
- nonfood nondurable goods
- e-commerce
- other markets such as durable goods and catalog sales

To illustrate historical trends, corrugated box demand and shipments, containerboard for corrugated boxes demand and shipments, and the various segments are reported at five-year intervals for 2008, 2013, and 2018.

This report analyzes the market for corrugated boxes and the main raw material used to make boxes, containerboard. Covered products include:

- corrugated boxes, including regular slotted containers and other corrugated containers such as die cut and five-panel folder boxes
- containerboard used to make boxes

Excluded from the scope of this report are:

- other paper packaging, including set-up boxes, mailers, paperboard folding cartons, protective packaging such as corrugated edge protectors and paper fill, and paper bags
- other disposable paper products, such as tissues, toilet paper, and paper foodservice products such as cartons, clamshells, boxes, buckets, cups, and straws
- corrugated board used to make products other than boxes, such as edge protectors and box partitions

Key macroeconomic indicators are also provided with quantified trends. Other various topics, including profiles of pertinent leading suppliers, are covered in this report. A full outline of report items by page is available in the Table of Contents.

Freedonia Methodology

The Freedonia Group, a subsidiary of MarketResearch.com, has been in business for more than 30 years and in that time has developed a comprehensive approach to data analysis that takes into account the variety of industries covered and the evolving needs of our customers.

Every industry presents different challenges in market sizing and forecasting, and this requires flexibility in methodology and approach. Freedonia methodology integrates a variety of quantitative and qualitative techniques to present the best overall picture of a market's current position as well as its future outlook: When published data are available, we make sure they are correct and representative of reality. We understand that published data often have flaws either in scope or quality, and adjustments are made accordingly. Where no data are available, we use various methodologies to develop market sizing (both top-down and bottom-up) and then triangulate those results to come up with the most accurate data series possible. Regardless of approach, we also talk to industry participants to verify both historical perspective and future growth opportunities.

About This Report

Methods used in the preparation of Freedonia market research include, but are not limited to, the following activities: comprehensive data mining and evaluation, primary research, consensus forecasting and analysis, ratio analysis using key indicators, regression analysis, end use growth indices and intensity factors, purchase power parity adjustments for global data, consumer and end user surveys, market share and corporate sales analysis, product lifespan analysis, product or market life cycle analysis, graphical data modeling, long-term historical trend analysis, bottom-up and top-down demand modeling, and comparative market size ranking.

Freedonia quantifies trends in various measures of growth and volatility. Growth (or decline) expressed as an average annual growth rate (AAGR) is the least squares growth rate, which takes into account all available datapoints over a period. The volatility of datapoints around a least squares growth trend over time is expressed via the coefficient of determination, or r^2 . The most stable data series relative to the trend carries an r^2 value of 1.0; the most volatile – 0.0. Growth calculated as a compound annual growth rate (CAGR) employs, by definition, only the first and last datapoints over a period. The CAGR is used to describe forecast growth, defined as the expected trend beginning in the base year and ending in the forecast year. Readers are encouraged to consider historical volatility when assessing particular annual values along the forecast trend, including in the forecast year.
