About This Report

Scope & Method

This report forecasts to 2021 plastics processing machinery demand and shipments in nominal US dollars at the manufacturer level in Canada. Total demand is segmented by product in terms of:

- injection molding machinery
- extrusion machinery
- blow molding machinery
- 3D plastics printers
- other machinery such as thermoforming, calendering, and transfer molding machinery
- aftermarket parts

Total demand is also segmented by market as follows:

- packaging
- consumer/institutional
- construction
- other markets such as motor vehicles, aerospace, and machinery

To illustrate historical trends, total demand is provided in annual series from 2006 to 2016; shipments and the various segments are reported at five-year intervals for 2006, 2011, and 2016.

Excluded from the scope of this report are auxiliary equipment (such as blenders, dryers, feeders, and winders) and secondary machinery used to improve the appearance or usefulness of the final product (like coating, cutting, machining, polishing, and printing equipment), except in situations in which machinery is used in both primary and secondary plastics processing. Plastics processing equipment that forms an integral part of a form/fill/seal packaging machine and molds are also excluded. Machines that process rubber, silicones, and other non-thermoplastic polymers are also excluded.

This report quantifies trends in various measures of growth and volatility. Growth (or decline) expressed as an average annual growth rate (AAGR) is the least squares growth rate, which takes into account all available datapoints over a period. The volatility of datapoints around a least squares growth trend over time is expressed via the coefficient of determination, or r^2 . The most stable data series relative to the trend carries an r^2 value of 1.0; the most volatile – 0.0. Growth calculated as a compound annual growth rate (CAGR)

About This Report

employs, by definition, only the first and last datapoints over a period. The CAGR is used to describe forecast growth, defined as the expected trend beginning in the base year and ending in the forecast year. Readers are encouraged to consider historical volatility when assessing particular annual values along the forecast trend, including in the forecast year.

For any given historical year, US dollar amounts are obtained from values expressed in the applicable local currency. These local currency values are converted to US dollars at the average annual exchange rate for that year. For forecast years, the US dollar amounts assume the same annual exchange rate as that prevailing in 2016. All figures cited are in US dollars unless otherwise specified. Key macroeconomic indicators are also provided with quantified trends. Other various topics, including profiles of pertinent leading suppliers, are covered in this report. A full outline of report items by page is available in the Table of Contents.

Sources

Plastics Processing Machinery: Canada (FA75024) is based on [Global Plastics Processing Machinery](#), a comprehensive industry study published by The Freedonia Group. Reported findings represent the synthesis and analysis of data from various primary, secondary, macroeconomic, and demographic sources including:

- firms participating in the industry, and their suppliers and customers
- government/public agencies
- national, regional, and international non-governmental organizations
- trade associations and their publications
- the business and trade press
- indicator forecasts by The Freedonia Group
- the findings of other reports and studies by The Freedonia Group

Specific sources and additional resources are listed in the Resources section of this publication for reference and to facilitate further research.
