About This Report

Scope & Method

This report forecasts to 2022 US grain-based foods demand and shipments in nominal US dollars at the manufacturer level. Total demand and shipments are segmented by product in terms of:

- commercial and retail bakeries
- dough, pasta, and tortillas
- crackers
- cookies
- breakfast cereals
- frozen goods
- other products such as granola and cereal bars, non-frozen perishable prepared foods, and grain-based snack foods

To illustrate historical trends, total demand, total shipments, the various segments, and trade are provided in annual series from 2007 to 2017.

Grain-based foods are based on flour derived from the processed seeds of grain crops (including corn), yielding starch-enriched flours for use in baking and other modes of food preparation. In addition, flours derived from alternative sources such as fruits, vegetables, or nuts (e.g., almonds) are also included. Animal food is excluded from the scope of this report, as are non-grain-based snack foods. Re-exports of grain-based foods are excluded from demand and trade figures.

This report quantifies trends in various measures of growth and volatility. Growth (or decline) expressed as an average annual growth rate (AAGR) is the least squares growth rate, which takes into account all available datapoints over a period. The volatility of datapoints around a least squares growth trend over time is expressed via the coefficient of determination, or r^2 . The most stable data series relative to the trend carries an r^2 value of 1.0; the most volatile – 0.0. Growth calculated as a compound annual growth rate (CAGR) employs, by definition, only the first and last datapoints over a period. The CAGR is used to describe forecast growth, defined as the expected trend beginning in the base year and ending in the forecast year. Readers are encouraged to consider historical volatility when assessing particular annual values along the forecast trend, including in the forecast year.

Key macroeconomic indicators are also provided with quantified trends. Other various topics, including profiles of pertinent leading suppliers, are covered in this report. A full outline of report items by page is available in the Table of Contents.

Sources

Grain-Based Foods: United States (FF10016) represents the synthesis and analysis of data from various primary, secondary, macroeconomic, and demographic sources including:

- firms participating in the industry, and their suppliers and customers
- government/public agencies
- national, regional, and international non-governmental organizations
- trade associations and their publications
- the business and trade press
- indicator forecasts by The Freedonia Group
- the findings of other reports and studies by The Freedonia Group

Specific sources and additional resources are listed in the Resources section of this publication for reference and to facilitate further research.
