ABOUT THIS REPORT

Scope & Method

This report forecasts US wood and competitive decking demand in lineal feet and US dollars at the manufacturers' level to 2020. Total demand in area and value terms is segmented by material in terms of:

- wood
- wood-plastic composite
- plastic and other materials such as metals, nonwood composites, and stone.

Decks are defined as unroofed, floored areas that are attached to the exterior of a structure. This report encompasses deck boards, which are used to make the floor of the deck, as well as railing systems (consisting of a top rail, spindles, and bottom rail) and other built-in accessories, such as stairs, benches, and planter boxes. This report does not include the structural components of decking systems (eg, posts and joists), as well as other outdoor structures, such as balconies, patios, or porches.

Total demand by area is also segmented by market as follows:

- residential buildings
- nonresidential buildings
- nonbuilding construction.

New construction decking is defined as a deck that is installed on a structure at the time of its erection, while improvement decking is defined as any deck installed subsequent to a building's completion.

To illustrate historical trends, total demand in both area and value terms is provided in an annual series from 2005 to 2015; the various segments are reported at five-year intervals for 2010 and 2015.

This report quantifies trends in various measures of growth. Growth (or decline) expressed as an average annual growth rate (AAGR) is the least squares growth rate, which takes into account all available datapoints over a period. Growth calculated as a compound annual growth rate (CAGR) employs, by definition, only the first and last datapoints over a period. The CAGR is used to describe forecast growth, defined as the expected trend beginning in the base year and ending in the forecast year. Readers are encouraged to consider historical volatility when assessing particular annual values along the forecast trend, including in the forecast year.

Key macroeconomic indicators are also provided at five-year intervals with CAGRs for

the years corresponding to other reported figures. Other various topics, including profiles of pertinent leading suppliers, are covered in this report. A full outline of report items by page is available in the [Table of Contents](#).

Sources

Wood & Competitive Decking: United States (FF60021) is based on [Wood & Competitive Decking](#), a comprehensive industry study published by The Freedonia Group in May 2016. Reported findings represent the synthesis and analysis of data from various primary, secondary, macroeconomic, and demographic sources including:

- firms participating in the industry, and their suppliers and customers
- government/public agencies
- national, regional, and international non-governmental organizations
- trade associations and their publications
- the business and trade press
- indicator forecasts by The Freedonia Group
- the findings of other industry studies by The Freedonia Group.

Specific sources and additional resources are listed in the [Resources](#) section of this publication for reference and to facilitate further research.

Industry Codes

The topic of this report is related to the following industry codes:

NAICS/SCIAN 2007		SIC	
North American Industry Classification System		Standard Industry Codes	
321114	Wood Preservation	2435	Hardwood Veneer and Plywood
321211	Hardwood Veneer and Plywood Mfg	2436	Softwood Veneer and Plywood
321212	Softwood Veneer and Plywood Mfg	2491	Wood Preserving
321219	Reconstituted Wood Product Mfg	2493	Reconstituted Wood Products
326199	All Other Plastics Product Mfg	3089	Plastics Products, NEC
332322	Sheet Metal Work Mfg	3444	Sheet Metal Work
