About This Report

Scope

This report forecasts to 2023 US cement and concrete additive demand in nominal US dollars at the manufacturer level. Total demand is segmented by product in terms of:

- chemicals
- minerals
- fibers

Total demand is also segmented by market as follows:

- building construction
- roads and bridges
- other markets such as airports, ports, and railways

To illustrate historical trends, total demand is provided in annual series from 2008 to 2018; the various segments are reported at five-year intervals for 2008, 2013, and 2018.

Excluded from the scope of this report are minerals used as substitute cementitious materials in clinker and blended cement production.

Key macroeconomic indicators are also provided with quantified trends. Other various topics, including profiles of pertinent leading companies, are covered in this report. A full outline of report items by page is available in the Table of Contents.

Sources

Cement & Concrete Additives: United States (FF60050) is based on [Global Cement & Concrete Additives](#), a comprehensive industry study published by The Freedonia Group. Reported findings represent the synthesis and analysis of data from various primary, secondary, macroeconomic, and demographic sources, such as:

- firms participating in the industry, and their suppliers and customers
- government/public agencies
- intergovernmental and non-governmental organizations
- trade associations and their publications
- the business and trade press
- indicator forecasts by The Freedonia Group
- the findings of other reports and studies by The Freedonia Group

About This Report

Specific sources and additional resources are listed in the Resources section of this publication for reference and to facilitate further research.

Industry Codes

Table 5 | NAICS & SIC Codes Related to Cement & Concrete Additives

NAICS/SCIAN 2017		SIC	
North American Industry Classification System		Standard Industrial Classification	
212393	Other chemical and fertilizer mineral mining	1499	Miscellaneous nonmetallic minerals, except fuels
325130	Synthetic dye and pigment manufacturing	2816	Inorganic pigments
325180	Other basic inorganic chemical manufacturing	2819	Industrial inorganic chemicals, not elsewhere classified
325211	Plastics material and resin manufacturing	2821	Plastic materials and resins
327212	Other pressed and blown glass and glassware manufacturing	2899	Chemicals and chemical preparations, not elsewhere classified
327420	Gypsum product manufacturing	3089	Plastic products, not elsewhere classified
327992	Ground or treated mineral and earth manufacturing	3229	Pressed and blown glass and glassware, not elsewhere classified
331110	Iron and steel mills and ferroalloy manufacturing	3275	Gypsum products
		3295	Minerals and earths, ground or otherwise treated
		3399	Primary metal products, not elsewhere classified

Freedonia Methodology

The Freedonia Group, a subsidiary of MarketResearch.com, has been in business for more than 30 years and in that time has developed a comprehensive approach to data analysis that takes into account the variety of industries covered and the evolving needs of our customers.

Every industry presents different challenges in market sizing and forecasting, and this requires flexibility in methodology and approach. Freedonia methodology integrates a variety of quantitative and qualitative techniques to present the best overall picture of a market's current position as well as its future outlook: When published data are available, we make sure they are correct and representative of reality. We understand that published data often have flaws either in scope or quality, and adjustments are made accordingly. Where no data are available, we use various methodologies to develop market sizing (both top-down and bottom-up) and then triangulate those results to come up with the most accurate data series possible. Regardless of approach, we also talk to industry participants to verify both historical perspective and future growth opportunities.

About This Report

Methods used in the preparation of Freedonia market research include, but are not limited to, the following activities: comprehensive data mining and evaluation, primary research, consensus forecasting and analysis, ratio analysis using key indicators, regression analysis, end use growth indices and intensity factors, purchase power parity adjustments for global data, consumer and end user surveys, market share and corporate sales analysis, product lifespan analysis, product or market life cycle analysis, graphical data modeling, long-term historical trend analysis, bottom-up and top-down demand modeling, and comparative market size ranking.

Freedonia quantifies trends in various measures of growth and volatility. Growth (or decline) expressed as an average annual growth rate (AAGR) is the least squares growth rate, which takes into account all available datapoints over a period. The volatility of datapoints around a least squares growth trend over time is expressed via the coefficient of determination, or r^2 . The most stable data series relative to the trend carries an r^2 value of 1.0; the most volatile – 0.0. Growth calculated as a compound annual growth rate (CAGR) employs, by definition, only the first and last datapoints over a period. The CAGR is used to describe forecast growth, defined as the expected trend beginning in the base year and ending in the forecast year. Readers are encouraged to consider historical volatility when assessing particular annual values along the forecast trend, including in the forecast year.
