About This Report

Scope

This report provides US general purpose credit card purchase value for non-co-branded and co-branded types for 2016-2018 in US dollars. Co-branded credit card purchase value is segmented by:

- airlines
- hotels
- retailers

Freedonia quantifies trends in various measures of growth and volatility. Growth (or decline) expressed as an average annual growth rate (AAGR) is the least squares growth rate, which takes into account all available datapoints over a period. The volatility of datapoints around a least squares growth trend over time is expressed via the coefficient of determination, or r^2 . The most stable data series relative to the trend carries an r^2 value of 1.0; the most volatile – 0.0. Growth calculated as a compound annual growth rate (CAGR) employs, by definition, only the first and last datapoints over a period. The CAGR is used to describe forecast growth, defined as the expected trend beginning in the base year and ending in the forecast year. Readers are encouraged to consider historical volatility when assessing particular annual values along the forecast trend, including in the forecast year.

A full outline of report items by page is available in the Table of Contents.

Sources

Co-Branded & Affinity Cards: United States (FF95074) is based on *Co-Branded and Affinity Cards in the U.S., 7th Edition*, a comprehensive industry study published by Packaged Facts. Data related to consumer demographics, attitudes, and behaviors were derived from the Simmons National Consumer Survey, a booklet-based survey of a large and random sample of consumers who in aggregate represent a statistically accurate cross-section of the US adult population (age 18+). Results from the 12-month Winter 2011 through 2019 surveys are analyzed.

The report also used Packaged Facts' proprietary May 2019 National Online Survey. The survey consisted of 2,011 online adults age 18+, who in aggregate represent a statistically accurate cross-section of the US adult population (age 18+). The survey responses were analyzed in aggregate via SPSS statistical software. Where applicable, results have been tested with Fisher's Least Significant Difference contrast test at a confidence level of 95%.

Purchase value estimates for the US co-branded credit card market are provided for 2018. Market estimates were derived from multiple sources, including:

About This Report

- company annual and quarterly filings
- FDIC Reports of Condition and Income (also known as Call Report data)
- credit card trusts (asset-backed securities backed by credit card loans held by financial institutions)
- Federal Reserve data
