# About This Report

---

## Scope & Method

This report forecasts to 2022 the global market for life science polymerase chain reaction (PCR) testing by product, type, application, and region in nominal US dollars. Product segments include:

- reagents/consumables
- instruments
- software and services

The total market is segmented by type:

- qPCR
- dPCR

The total market is also segmented by application:

- pharmaceutical research
- general medical/disease research

Major world regions include USA, Europe, Japan, China, Latin America, and the rest of the world. To illustrate historical trends, world, product, type, application, and regional demand are provided for 2017.

Market analyses in this report cover world markets for life science of PCR technology. However, the reader will find a bias toward the developed areas of the globe – North America, Japan, and Western Europe. These are also the areas in which much of the life science and clinical PCR based testing is currently performed.

For products sold to clinical laboratories or researchers, market data in this report are based on factory sales to the end user, and not on retail pricing or reimbursement payments. The dollar value of a market segment is proportional to the number of tests performed, because the cost of the instrumentation is generally buried in the per test price.

This report quantifies trends in terms of compound annual growth rates (CAGRs), which, by definition, employ in their calculation only the first and last datapoints over a period. The CAGR is used to describe forecast growth, defined as the trend beginning in the base year and ending in the forecast year. Forecasts are developed via the identification and analysis of pertinent statistical relationships and other historical trends and events, as well as their expected impact over the forecast period. Readers are encouraged to consider historical volatility when assessing particular annual values along the forecast trend, including in the forecast year.

## About This Report

Unless otherwise indicated, both historical and forecasted market values are expressed in US dollars at a fixed 2017 rate of exchange with local currencies.

Other various topics, including profiles of pertinent leading suppliers, are covered in this report. A full outline of report items by page is available in the Table of Contents.

## Sources

*Global Life Science PCR Testing* (FW40073) is based on *PCR Testing Market for Life Sciences* published by Kalorama Information. The information presented in this report is derived from publicly available information sources such as company reports and announcements, government reports and databases, medical organization reports, medical associations, and other publications. The analysis is based on the author's industry knowledge combined with literature searches and discussions with industry professionals and experts in the areas where PCR based assays are used.

It is important to note that the market areas covered by this report are evolving quickly, and that some of the company and technology information may be outdated even as the report goes to press. Kalorama Information is fully aware of these developments. Even though some of the details may have changed by the time this report is published, the major themes, players, and issues remain unchanged.

Specific sources and additional resources are listed in the Resources section of this publication for reference and to facilitate further research.

## Industry Codes

Table 6 | Industry Codes Related to the Life Science PCR Testing Market

NAICS/SCIAN 2007		SIC	
North American Industry Classification System		Standard Industrial Classification	
325412	Pharmaceutical Preparation Mfg	2834	Pharmaceutical Preparations
325413	In-Vitro Diagnostic Substance Mfg	2835	In Vitro and In Vivo Diagnostic Substances
