In paving markets, US demand for asphalt will rebound through 2011 from a low 2006 base, reflecting some moderation in asphalt pricing from historically high 2006 levels.

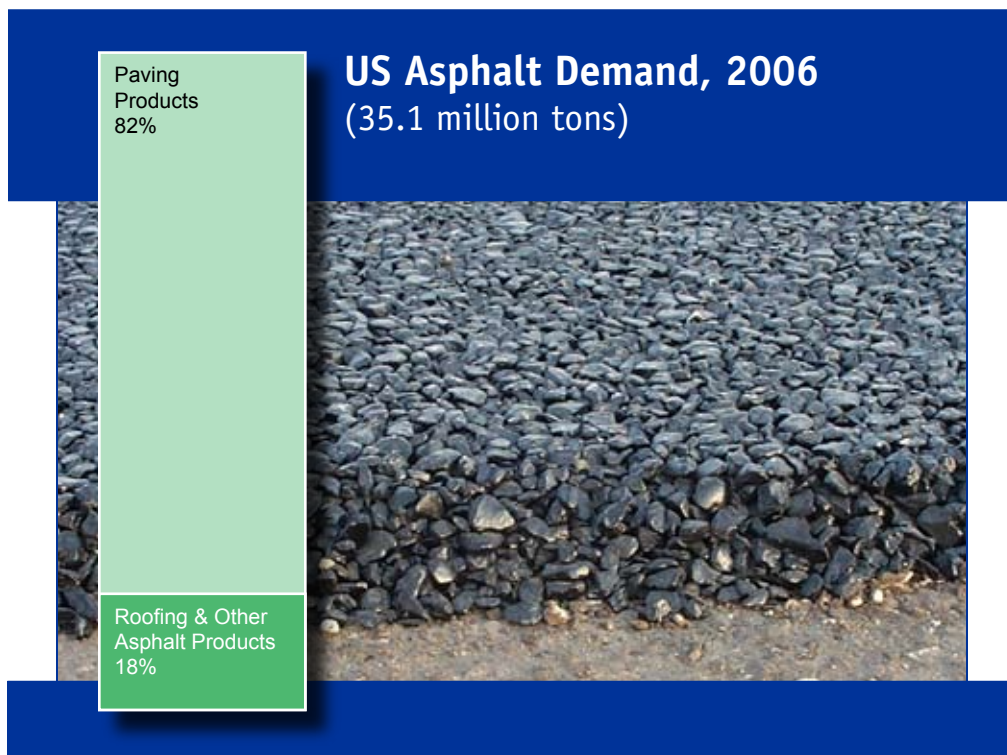

US demand to grow 1.7% annually through 2011

US demand for asphalt is forecast to advance 1.7 percent annually to more than 38 million tons in 2011. This is equivalent to 211 million barrels of primary asphalt, the vast majority of which is refinery asphalt. In paving markets, demand will rebound from a low 2006 base, reflecting some moderation in asphalt pricing from historically high 2006 levels. In roofing products, demand is expected to slow through 2011, primarily due to weak prospects in new single family home construction.

Dominant paving segment to outpace roofing uses

Paving products accounted for more than 80 percent of overall asphalt demand in 2006. Gains for paving products will be driven by increased federal and state spending on highway and road construction. Gains will proceed from a relatively weak 2006 base, when extremely high asphalt prices led to a rollback in paving activity. Overall, demand for asphalt in paving applications is forecast to increase 1.8 percent annually to 31.5 million tons in 2011.

Consumption of asphalt in roofing and other applications is projected to expand 1.4 percent annually to 6.7 million tons in 2011. This represents a deceleration from the growth posted in the 2001-2006 period, reflecting an expected decline in

new single family home construction, which will negatively impact asphalt roofing for steep slope applications, primarily asphalt shingles. Nevertheless, strongly improving prospects for asphalt low slope roofing products in nonresidential markets will partially offset the weakness in new residential markets. Growth opportunities will also continue to present themselves in maintenance and repair applications in both residential and nonresidential markets.

Asphalt products to outperform primary asphalt

Demand for products that utilize asphalt is expected to increase 3.9 percent per year to over \$18 billion in 2011. Among

paving products, emulsified asphalt will benefit from the use of in-place recycling, microsurfacing and chip seal technologies. Continuing adoption of performance-based specifications for road projects will generate demand for polymer-modified asphalts. However, asphalt cement will continue to be the dominant asphalt paving product.

Among asphalt roofing products, the best opportunities will be in modified asphalt membranes, which are increasingly replacing standard roofing felts in flat roof applications. Asphalt shingle demand will continue to benefit from use in maintenance and repair applications, although prospects in new housing will weaken.

Sample Text, Table & Chart

ASPHALT MARKETS

Nonresidential Building Construction

Through 2011, demand for asphalt employed in construction is projected to increase at an average rate of 2.8 percent per year. This growth is driven by the office, commercial and industrial segments and continued institutional construction expenditures, asphalt demand in paving applications will offer better prospects over the period.

SAMPLE TEXT

Compared to residential building markets, asphalt paving products generate a larger weight of asphalt demand in nonresidential building markets. Asphalt paving materials are used extensively in parking areas and walkways associated with nonresidential building construction. In particular, demand is dominated by parking lots built adjacent to shopping malls, office buildings and other industrial, commercial and institutional structures. In general, although concrete dominates demand for multilevel parking structures, asphalt is the primary surfacing material used in ground level lots. Demand for asphalt in paving materials for the nonresidential construction market is projected to increase 2.8 percent per year to 6.0 million tons in 2011.

Consumption of asphalt in roofing products intended for use in nonresidential construction markets is forecast to increase 1.9 percent annually to 3.6 million tons in 2011. Among asphalt roofing products, built-up roofing products, including standard roofing felts, modified roofing membranes and roofing asphalt have a far more substantial role than in residential building.

 The Company

known as uin-
 to the asphalt
 cal industries.

The Company is active in the US asphalt industry through the manufacture and sale of GILSONITE asphaltum. Asphaltum is a naturally occurring hydrocarbon resin similar in appearance to asphalt and coal. This brittle and lightweight resin softens in high temperatures and can be easily converted to powder form. GILSONITE asphaltum is used in more than 160 products to improve various performance qualities. Major applications include roofing materials, paving-grade asphalt, paints, varnishes, printing inks, drilling fluids, oilwell cements and foundry sands.

In roofing materials, GILSONITE is used to reduce the penetration of base asphalt without causing excessive aging or oxidation. The resin ensures that roofing membranes retain flexibility, resist high temperatures and do not soften over time, thereby reducing the risk of tears and leaks. Asphaltum is also used to improve the adhesion and pliability of patching compounds for roofing applications. GILSONITE asphaltum

“Paving demand for asphalt cement is forecast to grow 1.7 percent annually through 2011 to 28.8 million tons. Measured by value, demand for asphalt cement is projected to increase 3.3 percent annually through 2011 to \$6.8 billion. While volume growth is expected to reverse declines experienced from 2001 to 2006, value gains for asphalt cement will decelerate as ...”

--Section V, pg. 92

OTHER STUDIES

World Asphalt

This study analyzes the world market for asphalt. It presents historical demand data (1996, 2001, 2006) and forecasts for 2011 and 2016 by product (e.g., paving asphalt, roofing asphalt); world region (North America, Western Europe, Asia/Pacific, Latin America, Eastern Europe, Africa/Mideast); and for key countries within these regions. The study also discusses foreign trade, regional production capabilities, market share, cooperative agreements and product developments, and profiles major players.

#2274 12/2007..... \$5500

World Construction Aggregates

Global construction aggregates demand will rise 4.7% annually through 2011. India, China, Indonesia and Thailand will lead gains. Infrastructure repair and maintenance will drive demand in developed areas. Land use concerns will benefit aggregates made of recycled and waste materials. This study analyzes the \$139 billion world construction aggregates industry, with forecasts for 2011 and 2016 by type, market, application, world region and for 23 countries. It also evaluates market share and profiles major players.

#2272 12/2007..... \$5200

Gypsum Products in North America

Demand for gypsum products in the US, Canada and Mexico will reach 54.6 metric tons in 2011. Nonresidential buildings will offer the best opportunities and help offset weakness in the key residential construction market. Synthetic gypsum will continue to supplant mined gypsum for use in calcined gypsum products. This study analyzes the North American gypsum industry, with forecasts for 2011 and 2016 by product, market and country. It also evaluates company market share and profiles major producers.

#2225 08/2007..... \$4500

Asphalt in China

Demand for asphalt in China will rise 6% annually through 2010, driven by strong gains in road and building construction. Paving applications will outpace roofing and remain dominant. Asphalt shingles and modified bitumen membranes will gain market share in roofing while asphalt built-up and roll types will lose ground. This study analyzes the ¥23.3 billion Chinese asphalt market to 2010 and 2015 by product, market and region. It also evaluates company market share and profiles leading competitors.

#2167 03/2007..... \$4900

Roofing in China

Demand for roofing materials in China will rise 4.4% annually, outpacing all other major economies in the world. Concrete and clay tiles and bituminous roofing will remain the dominant types, while elastomeric and plastic membranes lead gains. The nonresidential building market will grow more rapidly than the residential segment. This study analyzes the ¥40 billion Chinese roofing industry to 2010 and 2015 by product, market and region. It also evaluates company market share and profiles major producers.

#2148 12/2006..... \$4900

About The Freedonia Group

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals • Plastics • Life Sciences • Packaging • Building Materials • Security & Electronics • Industrial Components & Equipment • Automotive & Transportation Equipment • Household Goods • Energy/Power Equipment

[Click here to learn more about Freedonia](#)

Freedonia Custom Research

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company's specific needs, companies harness Freedonia's research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia's team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
