US cast polymer demand will be driven by increasing consumer desire for engineered stone, which is projected to advance 7.0 percent annually to 84 million square feet in 2012.

US cast polymer demand to grow 3.6% annually through 2012

Demand for cast polymers is forecast to increase 3.6 percent annually to 265 million square feet in 2012. Demand will be driven by increasing consumer desire for engineered stone, which is projected to advance 7.0 percent annually to 84 million square feet in 2012. Homeowners are attracted to the material because of its performance and aesthetic qualities. The performance qualities of engineered stone, such as resistance to stains, impacts, moisture and other damage caused by wear and tear, as well as its minimal maintenance requirements, make it ideal for consumers who want a durable surfacing material. Additionally, engineered stone is seen as an aesthetically pleasing material. Engineered stone can look like natural stone, or can be made in a wide range of colors not normally seen in nature. The material can also be embedded with semiprecious stones or glass chips to create a visually attractive surface.

Countertops to remain dominant market

Countertops will continue to account for the largest share of cast polymer demand in 2012, comprising 84 percent of the total. In residential countertop applications, homeowners will increasingly select cast polymers over other

materials for their countertops, vanity tops and other surfaces because of cast polymers' consistent performance qualities and a growing perception that they are aesthetically superior to more common materials such as laminates. In nonresidential applications, demand will grow more slowly, due to concerns over the high cost of cast polymers compared to other surfacing options.

Solid surface segment to see increasing competition from other materials

Solid surface materials will continue to account for the largest share of demand for cast polymers, with 42 percent of the

total in 2012. However, these materials are forecast to have the lowest growth rate of all cast polymers. Gains will lag because of increased competition from such surfacing materials as engineered and natural stone, which are seen as more high-end materials, and competition from such less expensive materials as decorative laminates and tile. Solid surface demand will benefit from increased use of the material in nonresidential applications, such as schools, hospitals and other institutional facilities. Increasing recognition of solid surface as a durable material highly resistant to biological contaminants will drive advances.

Sample Text, Table & Chart

REGIONAL MARKETS

Midwest

The Midwest region, which consists of the East North Central and West North Central subregions, has some areas still experiencing the aftermath of the 2001 recession. At that time, manufacturing economy into decline. As real output in manufacturing steeply declined, both the region and the nation experienced layoffs and net job losses. In the Midwest region, manufacturing accounts for a higher share of economic activity than in the US overall. As manufacturing continues to come continue to shrink as a share of the national and regional economies, overall economic growth in the Midwest will not fare well in comparison to the national average. Through 2012, real economic growth is projected to increase 2.5 percent per year. As with the Northeast region, the Midwest is continuing to lose residents to the Sunbelt regions of the West and South, and the region's population will grow below the national average.

Demand for cast polymer materials in the Midwest is projected to increase to 5 million square feet in 2012. Advances in the residential construction market. Gains in the market primarily reflect reductions in housing completions. However, many of these new housing units will feature solid surface surfaces in an effort to increase their marketability. Home buyers want more sophisticated and durable finishes, but home builders are more frequently offering cast polymer countertops and vanity tops as standard surfacing options.

The residential remodeling market will also offer solid gains, as the older housing stock in the Midwest will contribute to opportunities for replacement countertops and other kitchen and bath components made from cast polymers. As many of these older homes have smaller kitchens and only one bathroom, many homeowners will choose to modernize

Key Products: ... granules for cast polymer equipment; and the manufacture of ...

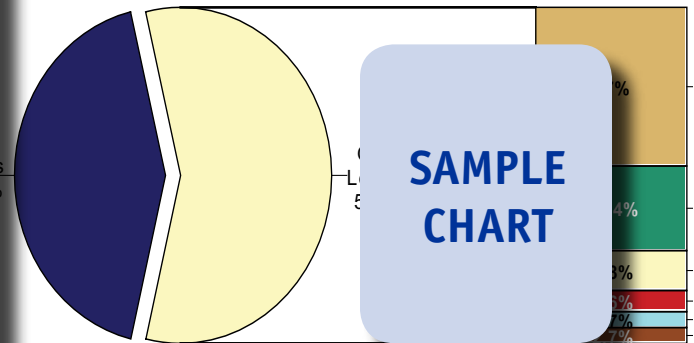

Fama Industries Corporation is a leading manufacturer of solid surface materials and other related products. The privately held company operates through 5 Canada-based divisions: Karadon Technologies Corporation, American Granule, Fama Direct, FIC Fabrication and Castle Brands.

The Company is active in the US cast polymers industry through the Karadon Technologies Corporation, American Granule, Fama Direct and FIC Fabrication divisions. Karadon Technologies makes and sells KARADON solid surface materials, which consist of a mixture of saturated polyester resins, alumina trihydrate (ATH), carbon black, ferric oxide, and other filler materials and colorants. KARADON solid surface materials feature resistance to damage caused by impacts, stains, high temperatures, moisture, and wear and tear. The materials do not require regular maintenance, and can be cleaned by common household products. KARADON solid surface materials can have satin or high-gloss finishes. The division offers KARADON in over 30 colors, including metallic and translucent hues, as well as varieties that resemble marble and other types of natural stone. Applications for

Free Handling & Shipping

There is NO charge for handling or UPS shipping in the US. Expect delivery in 3 to 5 business days. Outside the US, Freedonia provides free airmail service. Express delivery is available at cost.

Credit Card Orders

For convenience, Freedonia accepts American Express, MasterCard or Visa. Credit card purchases must include account number, expiration date and authorized signature.

Orders Outside of the US

Checks must be made payable in US funds, drawn against a US bank and mailed directly to The Freedonia Group. For wire transfers please contact our customer service department at info@freedoniagroup.com. Credit cards accepted.

Save 15%

If you order three (3) different titles at the same time, you can receive a 15% discount. If your order is accompanied by a check or wire transfer, you may take a 5% cash discount (discounts do not apply to Corporate Use Licenses).

Corporate Use License

Now every decision maker in your organization can act on the key intelligence found in all Freedonia studies. For an additional \$2300, companies receive unlimited use of an electronic version (PDF) of the study. Place it on your intranet, e-mail it to coworkers around the world, or print it as many times as you like,

OTHER STUDIES

Decorative Tile

US decorative tile demand will grow 4.3% annually through 2011. The dominant flooring market will lead gains as consumer preferences shift away from carpets and rugs. Nonresidential flooring will be particularly strong based on better appreciation of tile's advantages over other high-end flooring materials. This study analyzes the 3.2 billion square foot decorative tile industry, with forecasts for 2011 and 2016 by product, application and market. It also evaluates market share and profiles major producers.

#2285 01/2008..... \$4500

Molding & Trim

US demand for molding and trim will reach \$11 billion in 2011. Gains will be supported by healthy nonresidential construction activity, especially in office and commercial buildings. Interior moldings will remain the largest product segment, while plastic molding and trim continues to supplant wood materials. This study analyzes the US molding and trim industry, with forecasts for 2011 and 2016 by material, product and market. The study also evaluates market share and profiles leading producers.

#2286 12/2007..... \$4500

Composite & Plastic Lumber

US composite and plastic lumber demand will grow 10% yearly through 2011, based on performance advantages over wood. Wood-plastic composites will fare better than plastic lumber. Molding and trim will remain a key market while windows and doors, decking and other applications lead gains. This study analyzes the \$3.4 billion US composite and plastic lumber industry, with forecasts for 2011 and 2016 by material, application and market. It also evaluates company market share and profiles major players.

#2239 09/2007..... \$4500

Decorative Laminates

US sales of decorative laminates will grow 3.8% annually through 2011, driven by increased demand for laminate flooring, store fixtures and wall panels. Decorative foils and saturated papers will pace the dominant low-pressure laminate segment, while high-pressure laminates will lead gains. This study analyzes the US decorative laminate industry, with forecasts for 2011 and 2016 given by raw material, production process, product and market. It also evaluates company market share and profiles major firms.

#2203 06/2007..... \$4400

Nanotechnology in Construction

US demand for nanomaterials in construction will reach \$100 million in 2011, and leap to \$1.75 billion by 2025. Coatings will be the largest application, followed by composites and concrete additives. Nanoscale silica, titanium dioxide, and clay will post substantial gains. This study analyzes the US market for nanomaterials in construction, with forecasts for 2011, 2016 and 2025 presented by product, application and market. It also considers market environment factors and profiles leading industry players.

#2185 05/2007..... \$4500

About The Freedonia Group

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals • Plastics • Life Sciences • Packaging • Building Materials • Security & Electronics • Industrial Components & Equipment • Automotive & Transportation Equipment • Household Goods • Energy/Power Equipment

[Click here to learn more about Freedonia](#)

Freedonia Custom Research

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company's specific needs, companies harness Freedonia's research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia's team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
