INDUSTRY STRUCTURE

1 US Plastic Film Sales by Company, 2007 . 251
 Cht US Plastic Film Market Share, 2007 253
 2 Selected Acquisitions & Divestitures 261
 3 Selected Cooperative Agreements 271

Advances will reflect film's cost, performance and source reduction advantages over rigid packaging, as well as opportunities in film products such as pouches and modified atmosphere packaging.

US demand to exceed 16 billion pounds in 2012

Demand for plastic film in the US is projected to grow 2.6 percent annually to over 16 billion pounds in 2012, valued at \$13.4 billion (resin cost only). Total plastic film market value (including resins, additives, and processing and other costs) will reach nearly \$32 billion. Advances will reflect film's cost, performance and source reduction advantages over rigid packaging, as well as opportunities in film products such as pouches and modified atmosphere packaging. Low density polyethylene will remain the leading film, accounting for almost two-thirds of the total in 2012. Among the low volume films, degradable plastics will exhibit the fastest growth, followed by ethylene vinyl alcohol.

LDPE, polypropylene film to offer best opportunities

Demand for low density polyethylene film is forecast to increase nearly three percent yearly to 10.5 billion pounds in 2012. This will result from the film's competitive cost structure, versatility and opportunities in areas such as produce and snack packaging, stretch and shrink wrap, and trash bags. High density polyethylene film demand will grow at a below average pace as a result of slow retail bag advances. Polypropylene film demand will expand 3.4 percent annually to 2012, driven by produce, grain mill, dairy product and other food packaging applications.

US Plastic Film Demand, 2007 (14.2 billion pounds)

Polyethylene terephthalate (PET) film demand will continue to decline as remaining applications in photographic film and magnetic tape diminish further in the wake of continued inroads made by digital cameras, CDs and DVDs. Nonetheless, good opportunities are anticipated for PET film in food packaging applications such as snack foods, confections and frozen food, due to needs for higher barrier properties. Polyvinyl Chloride film demand will advance 1.0 percent annually through 2012 with further growth threatened by marginal increases in red meat consumption from polyolefin and degradable films.

Secondary packaging to be fastest growing market

The most rapidly growing use of plastic film is anticipated in the secondary packaging segment of the dominant packaging market, due to opportunities in areas such as stretch and shrink wrap, and retail bags. Food packaging will grow at a near average pace, driven by continued expansion in produce, confections and frozen food segments. Non packaging film advances will be fueled by trash bag growth. Research efforts will focus on improving film's strength, barrier and graphic capabilities, while maintaining a competitive cost position.

Sample Text, Table & Chart

TYPES & APPLICATIONS

Secondary Packaging

Demand for low density polyethylene film in secondary uses is expected to expand from \$3 billion in 2007 to \$4.5 billion in 2012, simulated by expansion of shrink wrap demand will grow to \$1.5 billion in 2012 as a result of its high resistance and competitive price. LLDPE also be more widely used in secondary packaging character lowers resin consumption and increases effectiveness.

SAMPLE TEXT

Best LDPE stretch film opportunities are anticipated for low density polyethylene, which has advantages such as high strength, puncture resistance and low cost. Metallocene LLDPE is increasingly being used due to their better downgauging capabilities and enhanced stretch attributes. LLDPE has the ability to not only stretch, but to actually exert a squeezing force as it tries to recover its original size. This capability makes LLDPE the ideal pallet load unitization material. Pallet wraps are used to fully encase a loaded pallet of boxes or other smaller shipping containers to provide greater load stability and protection from moisture or other damage. Stretch wrap, which is produced with one- or two-side cling, is favored in pallet unitization as it keeps loads clean and dry, does a better job of holding loads together than strapping or other methods, keeps material costs low and reduces labor costs. LLDPE stretch wrap also benefits the environment since it compresses well and is easily recycled. Moreover, resin downgauging has resulted in thinner gauges of film with improved performance characteristics and ultimately reduces the cost of the wrap.

The shrink film market is dominated by low density polyethylene which is projected to expand 4.5 percent annually to \$1.5 billion in 2012. Low density polyethylene shrink film is made from low melt virgin resin and other additives; when subjected to heat, it shrinks and conforms to the shape of the object being wrapped.

SAMPLE PROFILE

Applied Extrusion Technologies Incorporated (AET) develops and manufactures high-density polyethylene (HDPE), polypropylene (OPP) films. The privately held company's OPP films are used primarily in consumer product labeling, flexible packaging, overwrap and industrial applications.

The Company is involved in the US plastic film industry through the manufacture of a wide range of OPP films. Among these products are flexible packaging, nonfood packaging, graphic media, label and holographic films.

AET manufactures flexible packaging films for box overwrap, personal care item, snack food, baked good, dairy product, grain mill product, produce and pet food packaging applications. The Company's clear box overwrap films, which are designed to wrap tightly around packages, are suitable for use in various markets. For example, AET makes overwraps that can be utilized in personal care item packaging applications. The Company's products for snack food packaging end uses include T523-3 reverse printable, PST-2 sealable and AQS clear films. Other snack food packaging films include types that feature high oxygen barrier properties and enhanced sealability. AET's baked good

279 Copyright 2008 The Freedonia Group, Inc.

"Demand for low density polyethylene film in shipping sack production is expected to grow 2.5 percent per year to 470 million pounds in 2012, accounting for 94 percent of all films used. Over the past decade, LLDPE has overtaken LDPE in shipping sack applications as lower gauges of LLDPE can be used to provide the same strength as higher gauges of conventional LDPE, permitting lower resin requirements per sack. Polypropylene accounts for a significantly lower volume of shipping sack demand and the resin will remain a low volume player due to performance drawbacks."

Free Handling & Shipping

There is NO charge for handling or UPS shipping in the US. Expect delivery in 3 to 5 business days. Outside the US, Freedonia provides free airmail service. Express delivery is available at cost.

Orders Outside of the US

Checks must be made payable in US funds, drawn against a US bank and mailed directly to The Freedonia Group. For wire transfers please contact our customer service department at info@freedoniagroup.com. Credit cards accepted.

Credit Card Orders

For convenience, Freedonia accepts American Express, MasterCard or Visa. Credit card purchases must include account number, expiration date and authorized signature.

Save 15%

If you order three (3) different titles at the same time, you can receive a 15% discount. If your order is accompanied by a check or wire transfer, you may take a 5% cash discount (discounts do not apply to Corporate Use Licenses).

Corporate Use License

Now every decision maker in your organization can act on the key intelligence found in all Freedonia studies. For an additional \$2300, companies receive unlimited use of an electronic version (PDF) of the study. Place it on your intranet, e-mail it to coworkers around the world, or print it as many times as you like,

OTHER STUDIES

Engineering Plastics

This study analyzes the US engineering resin industry. It presents historical demand data (1997, 2002 and 2007) and forecasts for 2012 and 2017 by resin (e.g., ABS, polycarbonate, nylon, polyesters, polyacetal, fluoropolymers, PPO, polysulfones, PPS, polyimides) and market (e.g., electrical and electronic, motor vehicles, consumer and institutional, construction). The study also considers market environment factors, details industry structure, evaluates company market share and profiles industry players.

#2404 09/2008..... \$4600

Silicones

US silicone demand will rise 4.2% annually through 2012. Silicone fluids will lead gains based on their tendency to boost the performance of cosmetics and toiletries. The relatively small medical market will outpace all others. Silicone conditioning agents and emollients will be the fastest growing applications. This study analyzes the \$3.2 billion US silicone industry, with forecasts for 2012 and 2017 by product, market and application. It also evaluates company market share and profiles major players.

#2385 07/2008..... \$4500

Plastic Sheet

Demand for plastic sheet in the US will reach 7.7 billion pounds in 2011, based on sheet's versatility, aesthetic and material combining advantages. Food packaging will be the fastest growing market and account for nearly half of all demand. Polystyrene, polypropylene and polyester sheet offer the best prospects by resin type. This study analyzes the \$6.7 billion US plastic sheet industry, with forecasts for 2011 and 2016 by resin and market. It also evaluates company market share and profiles major players.

#2283 12/2007..... \$4500

Biodegradable Plastics

This study analyzes the US degradable plastics industry. It presents historical demand data for the years 1997, 2002 and 2007 and forecasts for 2012 and 2017 by degradable plastic type (e.g., polylactic acid, starch-based, cellophane, polyester-based, photodegradable, polyvinyl alcohol, polyethylene oxide); and market (e.g., packaging, fiber, medical). The study also considers market environment factors, details industry structure, evaluates company market share and profiles industry participants.

#2387 08/2007..... \$4600

Metalocene & Single-Site Polymers

US metallocene and single-site polymer demand will grow 17.7% annually through 2011. mLLDPE will remain dominant while mHDPE and polypropylene will lead gains. Film and sheet will stay the most common application, but will be outpaced by injection and blow molding uses. This study analyzes the \$2.4 billion US metallocene and single-site polymer industry, with forecasts for 2011 and 2016 by polymer, application and market. It also evaluates company market share and profiles leading competitors.

#2218 07/2007..... \$4400

About The Freedonia Group

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals • Plastics • Life Sciences • Packaging • Building Materials • Security & Electronics • Industrial Components & Equipment • Automotive & Transportation Equipment • Household Goods • Energy/Power Equipment

[Click here to learn more about Freedonia](#)

Freedonia Custom Research

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company's specific needs, companies harness Freedonia's research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia's team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
