*Gains will be based on continued strong prospects in developing nations, particularly China, which will claim 30 percent of overall length demand gains for plastic pipe through 2012.*

## Global demand to grow 4.6% yearly through 2012

Worldwide demand for plastic pipe is forecast to increase 4.6 percent annually through 2012 to 8.2 billion meters, or 18.2 million metric tons. Gains will be based on continued strong prospects in developing nations, particularly in China. In fact, China will account for 30 percent of overall length demand gains for plastic pipe between 2007 and 2012.

## PVC to remain leading plastic pipe resin

Polyvinyl chloride (PVC) is the leading plastic pipe resin, accounting for nearly two-thirds of plastic pipe demand by weight in 2007. PVC pipe is popular because of its low cost, durability, strength and ease of extrusion, allowing it to make inroads against non-plastic pipe materials. Demand for HDPE pipe will benefit from use as small-diameter pipe in natural gas transmission, as conduit for electrical and telecommunications applications, and as corrugated pipe for drains and sewers. While comparatively small, demand for fiberglass pipe will post well above average gains, reflecting growth in extreme environment uses.

## Developed countries to continue accounting for most plastic pipe demand

Despite below-average growth, developed countries will continue to account for the majority of total plastic pipe

demand. These regions (Western Europe and North America, as well as certain nations in the Asia/Pacific region, such as Japan and Australia) have the highest levels of pipe use intensity. However, they are also comparatively mature markets, where growth in construction activity tends to be well below the global average, inhibiting growth rates for plastic pipe.

In the developing countries of Eastern Europe, Asia (exclusive of Japan) and the Africa/Mideast region, gains will outpace the global average, benefitting from ongoing infrastructure development. Economic growth in these countries will create demand for plastic pipe in networks for telecommunications and

in residential home building applications. In addition, ongoing efforts across these regions to upgrade water treatment systems will boost demand for plastic pipe used for potable water delivery and in drainage and sewage applications.

Finally, in many nations, demand will benefit from the expansion of natural gas distribution networks. A large number of these networks are currently under construction, in response to accelerating demand for natural gas in heating, industrial fuel and electricity generation applications. In particular, growth in these applications will benefit high density polyethylene (HDPE) pipe.

**SAMPLE TABLE**

**CENTRAL AND EASTERN EUROPE**

**Germany: Plastic Pipe Demand**

Demand for plastic pipe products in Germany is projected to increase from 1.2 billion metric tons in 2007 to 1.5 billion metric tons in 2012. In length terms, demand will increase from 1.2 billion meters in 2007 to 1.5 billion meters in 2012. Gains will be concentrated in the construction environment in Germany, particularly in the water supply sector. Gains in demand will be offset by declines in metal, clay and other pipe products. Demand for plastic pipe in Germany is used in construction and sewer and waste water applications, accounting for 38 percent of total demand. Demand is concentrated in construction applications, primarily water transmission uses such as potable water, sewer and drainage pipe. Demand for PVC pipe in Germany is moderated by increasing environmental restrictions on PVC materials of all kinds. The disposal of PVC products in landfills was banned in 2005, and incineration is limited and regulated, so that PVC pipe use must be viewed with an eye toward its eventual recyclability. Over the last several decades, nearly 300 German municipalities have banned or restricted the use of PVC building products, including PVC pipe.

**SAMPLE  
PROFILE**

Mit... (MCHC) is a holding company... companies and their subsidiaries: Mitsubishi Chemical Corporation, Mitsubishi Plastics Incorporated and Mitsubishi Tanabe Pharma Corporation. The Company operates through five segments: Petrochemicals, Performance Products, Functional Products, Health Care and Other.

The Company is active in the world plastic pipe industry through the Functional Products segment, which recorded sales of \$3.5 billion in FY 2008. Among the businesses that operate through the Functional Products segment is the Mitsubishi Plastics Incorporated subsidiary (Japan), a leading Japanese producer of plastics and plastic products, including pipe. The company operates in four divisions, of which the Building Materials division manufactures rigid polyvinyl chloride (PVC), polyethylene and biodegradable plastic pipe. Through division, Mitsubishi Plastic produces and sells PVC pipe under the HISHIPIPE brand name for applications in the municipal water supply, sewage, agriculture, construction and chemical industries. Polyethylene pipe

319 Copyright 2008 The Freedonia Group, Inc.

“Demand for pipe products in Germany is projected to increase 2.5 percent annually through 2012 to 520 million meters. This represents the reversal of a trend which has been in place for the last ten years, when demand for pipe suffered due to steadily declining levels of construction activity, particularly in the residential sector. As residential construction finally returns to a positive growth arc, demand for pipe products of all kinds will benefit. In particular, demand will increase for ...”  
 --Section V, pg. 88-9

**OTHER STUDIES**

**Plastic & Competitive Pipe**

This study analyzes the US pipe industry. It presents historical demand data (1998, 2003 and 2008) and forecasts to 2013 and 2018 by pipe material (concrete, steel, plastic, cast iron, copper, aluminum, clay) and application (e.g., potable water, natural gas and oil, conduit, drain and sewer, drain, waste and vent, drainage and irrigation, process, structural and mechanical). The study also considers market environment factors, details industry structure, evaluates company market share and profiles industry players.  
 #2472 ..... 03/2009..... \$4800

**Plumbing in China**

Demand for plumbing products in China will grow 9.9% annually through 2012. Ongoing trends toward multiple bathrooms and larger kitchens and further penetration of bathtubs and showers in Chinese homes will help fuel gains. The residential market will remain dominant while the nonresidential market will grow the fastest. This study analyzes the 75.6 billion yuan plumbing product industry, with forecasts for 2012 and 2017 by material, product, market and region. It also details market share and profiles industry players.  
 #2410 ..... 11/2008..... \$5100

**Large Diameter Pipe in China**

Demand for large diameter pipe in China will grow 9% annually through 2012, driven by continued increases in spending on physical infrastructure and new building construction. Pipe used in sanitary sewer, drainage, storm sewer and natural gas transportation applications will see the fastest growth. This study analyzes the 57.1 million meter large diameter pipe industry in China, with forecasts for 2012 and 2017 by material type, market and geographic region. It also evaluates market share and profiles industry participants.  
 #2400 ..... 10/2008..... \$5100

**Large Diameter Pipe**

US large diameter pipe demand will reach \$10 billion in 2012, driven by a rebound in construction and expansions and upgrades for an aging pipe infrastructure. Concrete pipe will remain dominant while plastic pipe grows the fastest. Storm sewers will continue as the leading market due to widespread drainage uses and expanded road construction. This study analyzes the US large diameter pipe industry, with forecasts for 2012 and 2017 by market and material. It also evaluates market share and profiles industry players.  
 #2401 ..... 09/2008..... \$4600

**Construction Outlook in China**

Construction expenditures in China will grow 9.2% annually through 2012. Nonbuilding construction will be the fastest growing sector based on the expansion and upgrading of the country's physical infrastructure, and on utilities construction. Nonresidential building will remain the largest market. This study analyzes the ¥4.8 trillion construction sector in China, with forecasts for 2012 and 2017 by type, market and geographic region. It also evaluates company market share and profiles industry participants.  
 #2356 ..... 07/2008..... \$5100

**About The Freedonia Group**

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals • Plastics • Life Sciences • Packaging • Building Materials • Security & Electronics • Industrial Components & Equipment • Automotive & Transportation Equipment • Household Goods • Energy/Power Equipment

[Click here to learn more about Freedonia](#)

**Freedonia Custom Research**

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company's specific needs, companies harness Freedonia's research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia's team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
