Global demand to increase 3.5% yearly through 2013

World demand for converted flexible packaging is forecast to increase 3.5 percent per year to over 19 million metric tons in 2013, faster than real (inflation-adjusted) gains in GDP. Factors contributing to rising demand will include growth in food and beverage production, which represents the largest market by far. In addition, cost, performance and source reduction advantages, as well as ongoing developments in high-barrier resins and value-added features, will continue to favor flexible packaging products over their rigid counterparts.

Environmental, cost advantages to benefit mature markets

However, gains will be limited by the mature state of the packaging industry in developed areas such as the US, Western Europe and Japan, where the main markets for flexible packaging (i.e., food, pharmaceuticals, cosmetics) are well-established. Material downgauging will also restrain volume gains. Nonetheless, demand for converted flexible packaging will benefit from the products’ environmentally friendly image (as they are often associated with reduced packaging efforts), as well as cost advantages compared to rigid containers -- especially considering their lighter weight (which imparts transportation cost savings), their smaller size (which imparts storage space savings) and their lower energy requirements during production.

Developing regions to see fastest increases in demand

The fastest increases will occur in the world’s developing regions. Asia, Latin America, Eastern Europe and the Africa/Mideast region will all outpace the global average. Population growth and greater urbanization (except in Eastern Europe), industrialization trends, and expanding international trade will support advances in these regions’ generally underdeveloped packaging sectors. Rising consumer income levels and expanding middle-classes will also generate robust internal demand for packaged consumer goods like processed foods, beverages, pharmaceuticals, and cosmetics and toiletries, boosting converted flexible packaging consumption.

Some of the best gains are expected in China, which has surpassed Japan to become the world’s second largest converted flexible packaging market (behind the US); and India, which will benefit from strong growth in domestic output and consumer product markets. Rapid gains are also expected in Russia and Indonesia, which will benefit from greater investment in state-of-the-art manufacturing equipment, resulting in improved product quality.
**ASIA/PACIFIC**

**South Korea: Converted Flexible Packaging Demand**

South Korea consumed 270,000 metric tons of converted flexible packaging in 2008, or under five percent of the regional total. Unlike many other countries in the region, South Korea’s packaging market is already well developed by international standards. Through 2013, converted flexible packaging demand in South Korea is projected to rise 2.1 percent per annum to 300,000 metric tons, an improvement over the 2003 to 2008 period. Demand will be supported by continued economic expansion and an acceleration in the nation’s food and beverage output.

Established trends toward environmentally friendly and reduced-size packaging will continue into the forecast period. These trends will favor flexible packaging over rigid containers, while at the same time limiting gains as manufacturers invest significant efforts in reducing overall packaging consumption. Increases in the ranks of the middle and working classes in South Korea will promote demand for packaging-intensive prepared and convenience foods. Moreover, greater penetration of Western-style retailing practices, including a heavier emphasis on brand name goods, is putting a premium on packaging materials, including flexible packaging products.

Polyethylene and polypropylene will continue to surpass other packaging resins such as polystyrene and polyvinyl chloride. Polyethylene will benefit from growth in the country’s food packaging industry along with greater consumer demand for items such as cleaning products, cosmetics and toiletries. Advances in converted flexible packaging are also expected in pharmaceutical applications, as South Korea will remain the third largest health care market in the developing Asia/Pacific region (after China and India), both in terms of health expenditures and medical product demand. Efforts by the government to hold down health spending inflation will promote the greater use of prescription drugs in patient treatment. In addition, the diversification of national drug makers

COMPANY PROFILES

Chemosvit as
Sturova 101
059 21 Svit
Slovakia
421-52-715-1111-2
http://www.chemosvit.sk

Sales: $271 million (2007, as reported by company)
Employment: 2,600 (2007, as reported by company)
Key Products: biaxially oriented polypropylene film, monolayer films, laminates, bags and pouches

Chemosvit is a manufacturer of films and film products, fibers and fiber products, machinery, and related products and services. The privately held company operates through various subsidiaries.

The Company participates in the world converted flexible packaging industry through the operations of its Terichem AS joint venture and Chemosvit Folie AS subsidiary. These companies manufacture biaxially oriented polypropylene (BOPP) film and conduct converting operations. Terichem (Slovakia) is a joint venture between Chemosvit and AB Rani Plast Oy (Finland). Terichem produces BOPP films in thicknesses of three to 50 microns, and in coextruded and monolayer varieties. Specifically, coextruded films are sold under the TATRAFAN product line, which comprises heat sealable films with moisture and odor barrier properties for food packaging applications. The company also makes nontoxic BOPP wrapping films for end uses that include direct contact with food. Terichem maintains production facilities in Svit, Slovakia; and Luck, the Ukraine.

Chemosvit Folie (Slovakia) manufactures monolayer films, laminates, bags and pouches for such applications as packing confectionery.

Sample Profile, Table & Forecast

“World demand for polyethylene-based converted flexible packaging is projected to increase 3.6 percent per annum through 2013 to almost eight million metric tons, or 41 percent of the global total. This will remain the most broadly used converted flexible packaging material, based on the film’s low cost and versatility. The increased availability of improved metallocene grades, which seal at lower temperatures, are stronger and enable downgauging, will also propel gains.”

World Foodservice Disposables

This study analyzes the global foodservice disposables industry. It presents historical demand data for the years 1998, 2003 and 2008, and forecasts for 2013 and 2018 by product type (e.g., service-ware, packaging, napkins), market (e.g., eating and drinking places, retail stores and vending machines, institutional establishments), world geographic region and major national market. The study also considers market environment factors, details industry structure, evaluates company market share and profiles industry players.

#2573 ................... 11/2009 .................. $5600

Converted Flexible Packaging

This study analyzes the US converted flexible packaging industry. It presents historical demand data for the years 1998, 2003 and 2008, and forecasts for 2013 and 2018 by material (e.g., plastic film, paper, aluminum foil), product (e.g., bags, pouches), market (e.g., meats, baked goods, snack foods, pharmaceuticals, paper and textile products, chemicals), world region and for 20 countries. The study also considers market environment factors, evaluates company market share and profiles industry players.

#2558 ................... 10/2009 .................. $4900

Lawn, Garden & Agricultural Packaging

US lawn, garden and agricultural packaging demand will reach $1.7 billion in 2013. Consumer preferences for convenient, user-friendly packaging will benefit recyclable pouches, dispensing closures and other value-added types. Agriculture will remain the largest market while the consumer market grows the fastest. This study analyzes the US lawn, garden and agricultural packaging industry, with forecasts for 2013 and 2018 by material, application and product. It also evaluates market share and profiles industry players.

#2555 ................... 09/2009 .................. $4600

Meat, Poultry & Seafood Packaging

US demand for meat, poultry and seafood packaging is forecast to grow 3.5% yearly through 2013. Gains will be driven in part by the continuing shift to higher cost case-ready packaging by many retailers as a means to reduce in-store labor costs. Flexible packaging will outpace the larger rigid packaging segment. This study analyzes the $7.7 billion US meat packaging industry, with forecasts for 2013 and 2018 by technology and raw material, product, application and market. It also evaluates market share and profiles industry players.

#2522 ................... 06/2009 .................. $4700

Food Containers: Rigid & Flexible

US food container demand will reach $25 billion in 2013. Unit expansion will be aided by the growing popularity of single-serving packaging in a widening range of applications. Plastic containers, and bags and pouches will see the fastest growth, often supplanting cardboard, metal and glass containers. This study analyzes the $22 billion US rigid and flexible food container industry, with forecasts for 2013 and 2018 by type and market. It also evaluates company market share and profiles industry competitors.

#2492 ................... 05/2009 .................. $4800

About The Freedonia Group

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals
- Plastics
- Life Sciences
- Packaging
- Building Materials
- Security & Electronics
- Industrial Components & Equipment
- Automotive & Transportation Equipment
- Household Goods
- Energy/Power Equipment

Freedonia Custom Research

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company’s specific needs, companies harness Freedonia’s research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia’s team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
