Factors contributing to rising food container demand include growth in global food output and trends toward convenience-oriented food options as a result of fast-paced lifestyles.

Global demand to increase 3.9% yearly through 2013

World demand for food containers is forecast to increase 3.9 percent per year to \$124 billion in 2013. Factors contributing to rising demand include growth in global food output and trends toward convenience-oriented food options as a result of fast-paced lifestyles. Demographic trends will also influence food container demand, such as the growing percentage of urban population and women in the workforce, coupled with increases in the number of single-person households. This will fuel consumer spending on packaged and processed foods, due to more limited time for meal preparation and convenience benefits.

Developing regions to see most rapid increases

While the US is by far the world's largest user of food containers, the most rapid increases will occur in the world's developing regions. Asia, Latin America, Eastern Europe and the Africa/Mideast region will all outpace the global average. Population growth and greater urbanization, industrialization trends, and expanding international trade will support advances in these regions' generally underdeveloped packaging sectors. Rising consumer income levels and expanding middle classes will also generate robust internal demand for packaged consumer goods like processed foods, boosting food container consumption. Some of the best gains are expected in the BRIC countries of Brazil,

Russia, India and China. In particular, China alone is expected to account for nearly one-quarter of global value gains in food container demand between 2008 and 2013.

Plastic containers to be fastest growing products

Overall, bags and pouches will remain the largest product type by a wide margin, supported by ongoing developments in high-barrier resins and value-added features such as microwaveable bags and resealable stand-up pouches. In addition, demand for bags and pouches will benefit from their favorable environmental profile, since they are often used as part of waste reduction efforts, impart storage space savings,

and generally require less energy to produce and transport compared to rigid packaging.

The fastest gains are anticipated for plastic containers, based on improvements in plastic container performance and their price competitiveness. Still, metal cans will remain an important segment of the food container mix due to the economic advantages of canned items in controlling food expenditures. While glass has traditionally been used in smaller wide-mouth container applications such as baby food, plastics are making inroads in these areas as well due to barrier property enhancements and improvements in hot-fill bottle construction and capabilities.

 Table & Chart**

ASIA/PACIFIC

India: Food Container Demand

Demand for food containers in India totaled \$1.1 billion accounting for less than four percent of the regional market. represents a relatively underdeveloped packaging market, due to its huge, impoverished and mostly rural population. Personal levels remain very low, by both regional and global standards. result, per capita spending on food is minimal. The country's processing industry is one of the least developed in the world, experiencing one of the fastest growth rates. Key markets include other grains and food crops, various processed foods, vegetable products, coffee, tea, spices, and betel nut-related products such as masala. Food packaging requirements largely consist of inexpensive containers, which holds down market value. The use of cheap reusable packaging alternatives, such as newspaper, jute bags, crates, in lieu of food containers will also limit demand. Nonetheless, gains will be propelled by the expansion of India's urban middle classes, the primary consumers of packaged consumer products. In addition, strong growth in the number of food retail stores will continue to fuel demand for high-quality and higher-priced containers that meet international standards, such as those used in Western-style grocery stores.

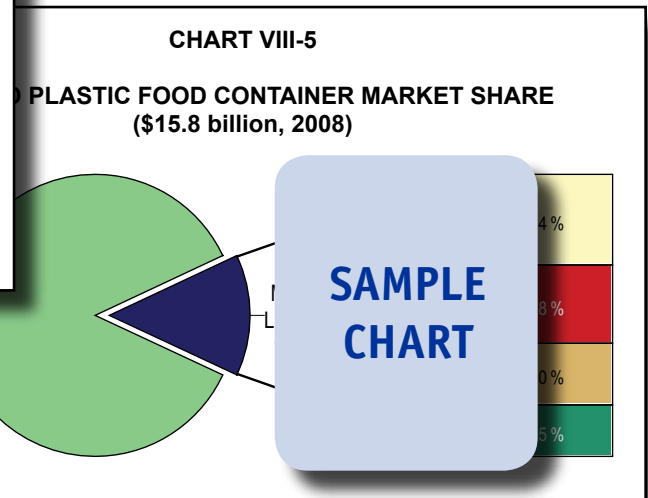

Food container demand in India is projected to increase at a robust 11.1% annually to \$1.1 billion in 2013. This represents the most rapid growth over the forecast period -- albeit from a low base (second only to Japan or China). Strong economic growth, rising domestic consumption, rising domestic consumption trends and the growing middle class will also fuel growth as the role of marketing takes on greater importance. In addition, efforts to improve sanitation and food safety, and reduce the country's high rate of food waste and spoilage will further support demand for food containers. However,

Key Products: virgin and recovered fiber-based cartonboard, folding cartons, and pre-formed bags

Mayr-Melnhof Group is a manufacturer of cartonboard and folding cartons for packaging food, tobacco, detergents and hygiene products. The Company operates through two segments: MM Karton and MM Packaging.

The Company participates in the world food container industry through both segments. Via these segments, Mayr-Melnhof Group manufactures virgin and recovered fiber-based cartonboard, folding cartons, and pre-formed bags.

MM Karton -- The MM Karton segment, which posted sales of \$1.1 billion and employed 2,560 in 2008, makes virgin and recovered fiber-based cartonboard that is suitable for use in the production of folding cartons. Of the segment's total 2008 sales, Western Europe accounted for 68 percent, Eastern Europe represented 18 percent, Asia accounted for six percent and other countries represented seven percent. The Company's cartonboard can be used to make folding cartons for

SAMPLE PROFILE

"... good opportunities will exist for all major types of food containers. Plastic containers, bags and pouches will experience the fastest gains, due to their cost and performance advantages. These products will benefit from strong demand for good barrier properties, as well as value-added features, such as microwavability and portability. Unlike in many countries, PET is among the most broadly used packaging materials in India, as the country's abundant domestic PET supplies render the high-performance resin more affordable than in other markets."
 --Section VI, pg. 144

OTHER STUDIES

Tube & Stick Packaging

US tube and stick packaging demand will rise 5.1% annually through 2014. The fastest gains are expected for stick packs, driven by advantages of product differentiation, portability and material savings compared to conventional single-portion pouches. The dominant squeeze tube segment will slightly lag the overall industry. This study analyzes the \$1.4 billion tube and stick packaging industry, with forecasts for 2014 and 2019 by product type and market. It also evaluates company market share and profiles industry players.

#2631 May 2010 \$4800

Corrugated & Paperboard Boxes

US corrugated and paperboard box demand will rise 2.4% yearly through 2014. Gains will be driven in part by higher-value types with better graphics capabilities, including folding cartons and corrugated boxes. Internet-based shopping will also support box demand. Durable goods will be the fastest growing market. This study analyzes the \$32.3 billion US corrugated and paperboard box industry, with forecasts for 2014 and 2019 by material, product and market. It also evaluates company market share and profiles industry players.

#2598 March 2010 \$4800

Frozen Food Packaging

US demand for frozen food packaging will climb 3.7% yearly through 2013. Gains will be driven by the popularity of convenience-type foods, the prevalence of microwave ovens, and technological advances in packaging. Frozen food specialties and meat, poultry and seafood will be the fastest growing applications. This study analyzes the \$5.7 billion US frozen food packaging industry, with forecasts for 2013 and 2018 by application and product. It also evaluates company market share and profiles industry players.

#2594 January 2010 \$4700

Microwave Packaging

US microwave packaging demand will climb 7% annually through 2013, driven in part by demand for more convenient meals coupled with the prevalence of microwave ovens. Frozen foods will remain the top use while fresh prepared foods will lead gains. Foodservice containers and tubs, cups and bowls will be the fastest growing types. This study analyzes the \$1.7 billion US microwave packaging industry, with forecasts for 2013 and 2018 by application and product. It also evaluates company market share and profiles industry players.

#2572 December 2009 \$4700

World Foodservice Disposables

Global demand for foodservice disposables is forecast to increase 4.8% annually through 2013. The US will remain the largest market by a wide margin, while more rapid growth is expected in China and other developing regions. Disposable foodservice packaging will be the fastest growing product segment. This study analyzes the \$38.5 billion world foodservice disposables industry, with forecasts for 2013 and 2018 by product, market, world region and for 18 countries. It also evaluates market share and profiles industry players.

#2573 November 2009 \$5600

About The Freedonia Group

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals • Plastics • Life Sciences • Packaging • Building Materials • Security & Electronics • Industrial Components & Equipment • Automotive & Transportation Equipment • Household Goods • Energy/Power Equipment

[Click here to learn more about Freedonia](#)

Freedonia Custom Research

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company's specific needs, companies harness Freedonia's research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia's team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
