INDUSTRY STRUCTURE

1 World Fertilizer Sales by Company, 2009	373
Cht World Fertilizer Market Share, 2009	376
2 Selected Acquisitions & Divestitures	379
3 Selected Cooperative Agreements	384

Factors including greater crop requirements for biofuel production and shrinking amounts of arable land will require farmers to improve crop yields, providing opportunities for fertilizers.

World demand to rise 3.8% annually through 2014

World demand for fertilizers is projected to increase 3.8 percent per year to 415 million metric tons in 2014. These gains will reflect an upswing from sluggish growth registered during the 2004 to 2009 period, as individuals reinvest in fertilization programs after reducing their input costs due to high prices and credit issues during 2008 and 2009. A growing global population, increasing consumption of high-protein products that require fertilizer intensive grains, greater crop requirements for biofuel production and shrinking amounts of arable land will require farmers to improve crop yields, providing opportunities for fertilizers. A more balanced nutrient approach to improving soil fertility will provide opportunities for multi-nutrient and organic fertilizer products.

Dominant agricultural market to rebound from global recession

Agriculture continues to dominate the fertilizer market. Record high raw material costs pushed fertilizer prices upwards during 2008 and parts of 2009. High input costs, in addition to volatile crop prices and a global recession, led farmers to try to keep operating costs in check, in part by reducing or postponing fertilizer applications during 2008 and 2009, particularly phosphate and potash types. Nitrogen fertilizers were not as severely impacted, as this nutrient is

relatively quickly removed from the soil and requires more regular application than other nutrient types. In general, fertilizer demand was impacted the most in countries where credit markets tightened due to the global recession and where fertilizer purchases are dependent on debt financing. In 2010, recessionary conditions began to subside, freeing up available credit, and farmers in many parts of the world began to reinvest in fertilizers to increase crop yields. Demand for fertilizer-intensive crops and pricing moderation will also benefit fertilizer use, particularly for phosphate and potash types. In addition, multi-nutrient and organic fertilizers will benefit as farmers shift toward more balanced nutrient delivery systems.

Growth in organic food production will provide opportunities for organic fertilizers.

Asia/Pacific region to remain largest market

Among the regional markets, Asia/Pacific will continue to control the largest portion of fertilizer demand, primarily due to its enormous agricultural sector. Above-average gains in fertilizer use will be attributable to the need for higher crop yields on less arable land in order to feed a growing population. Central and South America and Eastern Europe are also projected to offer above-average growth opportunities through 2014.

Sample Text, Table & Chart

ASIA/PACIFIC

Indonesia: Fertilizer Demand by Type

Demand for fertilizers in Indonesia is expected to increase 5.4 percent per year to nearly twelve million metric tons in 2014. Gains will be driven by increased agricultural production. Strong gains in building construction expenditures and personal incomes will also provide opportunities.

**SAMPLE
TEXT**

Of the single-nutrient fertilizers, nitrogen types are the most used. Urea accounts for the largest share of the nitrogen fertilizer product category. Phosphate and potash fertilizers find moderate use. Superphosphates are the most used phosphate fertilizers, while potash accounts for virtually all of potash fertilizer demand.

Multi-nutrient fertilizers will continue to gain market share among fertilizer types. These fertilizers accounted for 14 percent of fertilizer demand in 2009, up from only four percent in 1999. Phosphate-potash compounds account for the majority of multi-nutrient demand. Nitrogen-phosphate compounds find minimal use in the multi-nutrient category.

Other fertilizers account for the remainder of demand. Organic fertilizers, such as granulated compost, are expected to experience growth opportunities in the agriculture market. Historically, organic fertilizer use has been minimal in Indonesia, with organic accounting for only about one percent of total cropland. Rice is the primary organic food crop grown in Indonesia. However, interest in the development of the organic fertilizer product category is growing. Leading non-organic fertilizer producers are investing in organic fertilizer production facilities, and various municipalities in Indonesia are creating subsidies specifically for organic fertilizer varieties.

SAMPLE PROFILE

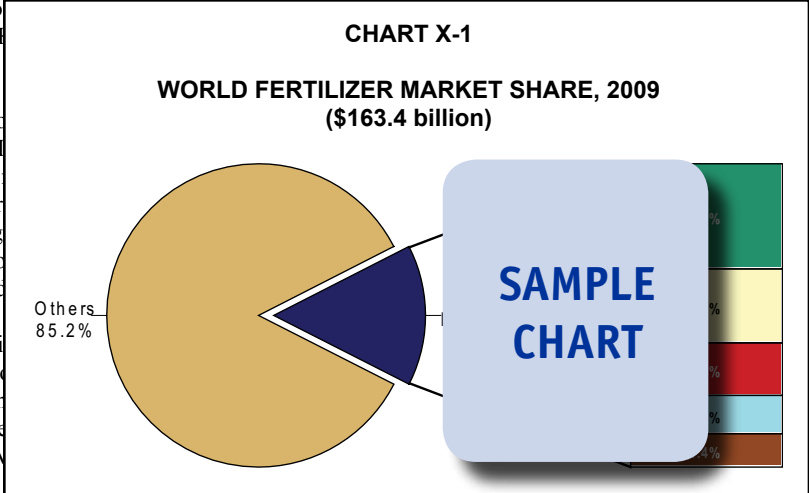

Sales: \$
 Employe
 Key Pro

PETROKEMIJA produces products for industrial, agricultural and consumer applications. The Company operates through six segments: Fertilizer Production, Soot Production, Clay Pro Liquid Fertilizer, Maintenance and Pallet Production. PETROKEMIJA is majority owned by the government of Croatia.

The Company is active in the world fertilizer industry through production of solid and liquid fertilizers. Among PETROKEMIJA solid fertilizers are nitrogen-phosphate-potassium, ammonium-potassium-ammonium-nitrate and urea-based types. Liquid fertilizers made by the company include products for flowers, apples, sugarcane, grapevines, vegetables, fruit trees, farm produce, oranges, lemons and grapefruit. These fertilizers are sold under the FERTINA brand.

PETROKEMIJA operates a manufacturing facility in Kutina, Croatia. In 2009, the Company produced 870,000 metric tons of fertilizer. Products are exported to 20 countries worldwide, including the United States, Canada, Mexico, Brazil, Argentina, Chile, Colombia, Peru, Venezuela, Ecuador, Bolivia, Paraguay, Uruguay, and Montenegro, Bosnia and Herzegovina, and Slovenia. For distribution in the United States, the Company conducts sales activities through the PETROKEMIJA subsidiary (Serbia) in Serbia.

OTHER STUDIES

Amines

This study analyzes the US amines industry. It presents historical demand data for the years 2000, 2005 and 2010, and forecasts for 2015 and 2020 by product (e.g., ethanalamines, alkylamines, fatty amines, specialty amines, ethyleneamines) and market (e.g., cleaning products, agricultural chemicals, personal care products, petroleum, water treatment, natural gas, plastics, rubber). The study also considers market environment variables, details industry structure, evaluates company market share and profiles industry players.

#2735 April 2011 \$4800

World Lawn & Garden Consumables

Global lawn and garden consumable demand will grow 4.3 percent annually through 2014. Gains will be influenced by the dominant US market, while developing regions grow the fastest from a smaller base. Seeds, fertilizers and growing media will provide fast growth. This study analyzes the \$12.7 billion world lawn and garden consumable industry, with forecasts for 2014 and 2019 by product, market, world region and for 17 countries. It also evaluates company market share and profiles industry participants.

#2678 October 2010 \$5800

Enzymes

US demand for enzymes will rise 4.8 percent annually through 2014. Gains will be driven by continued expansion of higher-value specialty enzymes in pharmaceuticals, diagnostics, research and biotechnology, and biocatalysts. In the biofuels segment, growth will moderate as the industry transitions to cellulases for producing biomass ethanol. This study analyzes the \$2.2 billion US enzymes industry, with forecasts for 2014 and 2019 by market and product. It also evaluates company market share and profiles industry competitors.

#2670 September 2010 \$4900

World Biofuels

Global biofuel demand will grow 10.3 percent annually through 2014. Bioethanol will see the greatest gains, driven by the large North American market as well as the faster growing markets in the Asia/Pacific region and Europe. The smaller biodiesel market will be the more rapidly growing segment. This study analyzes the 74.1 million metric ton global biofuel industry, with forecasts for 2014 and 2019 by product, world region and for 28 countries. It also evaluates company market share and profiles industry participants.

#2668 September 2010 \$5900

World Pesticides

Global demand for pesticides will rise 2.9 percent yearly through 2014. Gains will reflect a reversal of declines in 2009, caused in part by a price drop for the leading herbicide, glyphosate. Herbicides and insecticides will remain the largest types. Central and South America will offer the best growth opportunities. This study analyzes the \$45 billion world pesticide industry, with forecasts for 2014 and 2019 by product, market, world region and for 39 countries. It also evaluates company market share and profiles industry participants.

#2664 August 2010 \$5800

About The Freedonia Group

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals • Plastics • Life Sciences • Packaging • Building Materials • Security & Electronics • Industrial Components & Equipment • Automotive & Transportation Equipment • Household Goods • Energy/Power Equipment

Freedonia Custom Research

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company's specific needs, companies harness Freedonia's research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia's team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
