2 Selected Cooperative Agreements.....	252

Gains will be driven by performance advantages such as minimal maintenance requirements and resistance to stains, impact, moisture, and other damage caused by wear and tear.

US demand to rise 6.3% annually through 2016

Demand for cast polymers in the US is forecast to increase 6.3 percent per year to 251 million square feet in 2016. In most applications, cast polymers offer performance advantages such as minimal maintenance requirements and resistance to stains, impact, moisture, and other damage caused by wear and tear. Further advances will be restrained by competition from other surfacing options, including granite and laminates.

Engineered stone to remain fastest growing products

The market for cast polymers underwent a significant transformation over the past decade with engineered stone rising from a niche product to controlling over a quarter of sales. Demand for engineered stone grew rapidly from a small base during the 2001-2006 period due to its significant performance advantages over competitive products. Engineered stone continued to gain market share during the downturn, buoyed by sales to higher-end customers who were less impacted by the weak economy. While growth will continue to be above average, increases in demand will decelerate, tempered by the material's high price, limiting further market penetration.

After declining significantly during the 2006-2011 period due to a weak economy and fierce competition from engineered stone products, solid surface will

US Solid Surface & Other Cast Polymers Demand, 2016 (251 million square feet)

register healthy gains based on its well established market presence and high degree of durability. Solid surfaces are positioned as a mid level material in terms of pricing and performance.

Demand for gel-coated composites will rebound strongly through 2016 from the significant losses during the previous five years. Gel-coated composites registered the biggest declines during this time due to their heavy use in new construction. Going forward, gel-coated composites will benefit from the recovery in new housing construction, as well as design trends featuring a greater number of and more elaborate bathrooms in homes since gel-coated composites are primarily installed in bathrooms.

Residential improvements and repairs to remain largest application

Following the declines of the 2006-2011 period, gains will be driven by a sharp rebound in housing completions from depressed 2011. The residential improvement and repair segment will continue to account for the majority of cast polymer demand, so an upswing in residential remodeling activity and greater credit availability will also support gains. Sales of cast polymers will be further aided by a recovery in office and commercial, and institutional construction through 2016 -- the two nonresidential segments where cast polymers are most likely to be installed.

Sample Text, Table & Chart

PRODUCTS

Supply & Demand

Demand for engineered stone materials is projected to increase by 1.5 percent per year to 1.2 billion square feet in 2016. Unlike other polymers, cast polymer countertops have shown favorable growth through 2009 recession. Affluent individuals to invest in high-end materials such as the going for cast polymer countertops. Gains in area will reflect interest in engineered quartz, a common type of engineered stone, due to its performance and aesthetic qualities. Engineered stone surfaces are durable, nonporous, clean, and do not require regular maintenance such as sealing, which is burdensome. Engineered quartz is a biologically inert material, making it ideal for both residential and nonresidential applications. Its aesthetic qualities will also promote demand growth. Engineered stone resembles natural stone in appearance, but has a smoother surface and a consistent color and pattern. Like solid surface materials, engineered stone can be used to make the seamless countertop surfaces and integrated sinks popular with homeowners due to the ease of wiping down and cleaning them.

Demand gains will be promoted by a rebounding residential construction market. The expected increase in housing completions from the low levels of 2011 will boost demand for engineered stone. In the remodeling market, rising improvement and repair expenditures will spur growth. Kitchen and bathroom renovation projects are among the most common remodeling projects, and consumers frequently replace worn or less fashionable countertops with more attractive materials. Typically, as consumers renovate their kitchens, they often increase the space for countertops.

Demand for engineered stone in the nonresidential building construction market will also increase. Engineered stone can be

compound

Breton develops manufactures and markets equipment to process and produce engineered stone, ceramics, porcelain, and natural stone. The privately held company also licenses its manufacturing technologies worldwide. Breton operates via two divisions: Natural and Compound Stone, and Machine Tool. The Company has a production and development center in Castello di Godego, Treviso, Italy.

The Company is active in the US cast polymer industry via the Natural and Compound Stone division, which licenses Breton's proprietary BRETONSTONE and BRETONTERASTONE engineered stone production processes and BRETONSTONE CEMENT cement-based compound stone production process. These processes are licensed to third-party manufacturers in the US, Europe, the Africa/Mideast region and the Asia/Pacific region.

Breton's BRETONSTONE process combines quartz, marble, granite and other natural stones with polymer- or cement-based resins and pigments to form engineered stone. These materials are mixed and compacted using a vibrocompression vacuum process that removes

262 Copyright 2012 The Freedonia Group, Inc.

"The South is the largest regional market for cast polymers, representing 40 percent of total demand in 2011. Demand for cast polymers in the region is expected to increase 6.3 percent per year to 100.3 million square feet in 2016. Gains will be spurred by growth in housing completions in the region from the depressed 2011 levels. Moreover, the South is forecast to see the fastest growth in sales of existing homes through 2016, as transplants from the Northeast and Midwest arrive in the region."
 --Section VI, pg. 217-8

OTHER STUDIES

World Flooring & Carpets

World flooring and carpet demand will rise 4.9 percent yearly to 18.6 billion square meters in 2016. The Asia/Pacific region will see the most rapid growth. Nonresidential buildings will be the fastest growing market, while nonresilient flooring will pace products. North America will offer the best prospects for carpets and rugs. This study analyzes the 14.6 billion square meter world flooring and carpet industry, with forecasts for 2016 and 2021 by product, market, world region and for 20 countries. The study also evaluates company market share and profiles industry players.
 #2981January 2013 \$6300

High Performance Composites

US demand for polymer materials containing advanced fiber reinforcements is forecast to rise almost 15 percent per year to \$10.2 billion in 2016. Aerospace will remain the dominant and fastest growing market, followed by the energy market. Carbon will continue as the dominant and most rapidly growing fiber, followed by S-glass. This study analyzes the \$5.1 billion US high performance composite industry, with forecasts for 2016 and 2021 by fiber, market and resin. The study evaluates company market share and profiles industry players.
 #2905June 2012 \$4900

Cabinets

US demand for cabinets is forecast to rise 8.2 percent annually to \$15.3 billion in 2016, driven by a rebound in housing completions. The dominant kitchen cabinet segment will see the fastest growth. Demand will also be boosted by design trends that call for homes with more and larger cabinets to store food products and cookware. This study analyzes the \$10.3 billion US cabinet industry, with forecasts for 2016 and 2021 by material, product, market and region. The study also evaluates company market share and profiles industry players.
 #2904June 2012 \$5100

Decorative Laminates

US demand for decorative laminates is forecast to advance 5.5 percent per year to 12.4 billion square feet in 2015. The cabinet market will remain the largest segment, while flooring will record the most rapid gains. Saturated papers will grow the fastest within the dominant low pressure overlays product segment, followed by decorative foils. This study analyzes the 9.5 billion square foot US decorative laminate industry, with forecasts for 2015 and 2020 by material, product and market. The study also evaluates company market share and profiles industry players.
 #2849 February 2012 \$4900

Countertops

US demand for countertops is forecast to advance 4.8 percent annually through 2015. Gains in the key residential market will be promoted by a rebound in housing completions and by increasing improvement and repair spending. Furthermore, growing interest in making homes more marketable will benefit higher-value countertop materials. This study analyzes the 600 million square foot US countertop industry, with forecasts for 2015 and 2020 by material and market. The study also evaluates company market share and profiles industry players.
 #2788 September 2011 \$5100

About The Freedonia Group

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals • Plastics • Life Sciences • Packaging • Building Materials • Security & Electronics • Industrial Components & Equipment • Automotive & Transportation Equipment • Household Goods • Energy/Power Equipment

[Click here to learn more about Freedonia](#)

Freedonia Custom Research

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company's specific needs, companies harness Freedonia's research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia's team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
