INDUSTRY STRUCTURE

1 US Lamp Sales by Company, 2012	217
--	-----

EISA will ban the manufacture and sale of most general service incandescent lamps by 2014, initially benefiting more expensive products such as halogen lamps and CFLs.

US unit demand to decline 4% annually through 2017

As the US lamp market continues to adjust to the provisions of the Energy Independence and Security Act (EISA) of 2007, sales are projected to decline more than four percent annually in unit terms through 2017. EISA will effectively ban the manufacture and sale of most general service incandescent lamps by 2014, initially benefiting products such as halogen lamps and compact fluorescent lamps (CFLs), which are more efficient but also more expensive than the incandescent lamps they will replace. Because of the shift to higher value lamps, demand in value terms is expected to contract only slightly to \$7.2 billion in 2017. A steeper decline is projected through 2022 primarily due to two factors: rising competition from light-emitting diodes (LEDs) and the longer useful lifespan of CFLs and halogen lamps compared to incandescent types.

Halogen lamps to see strongest value increases

Halogen lamps are expected to see the strongest value demand increases through 2017, rising at a double-digit annual pace to \$1.8 billion. These lamps will take a large share of the market from the general purpose traditional incandescent lamps because they fit in existing lighting fixtures and generate a quality of light very similar to traditional incandescent lamps at a lower initial price than any other energy efficient lighting

US Lamp Demand, 2017 (\$7.2 billion)

product. The most significant impact will be in the residential market, where sales of halogen lamps are expected to triple through 2017. However, halogen lamps are less efficient and shorter-lived than LEDs and will face strong competition from these products.

The market for fluorescent lamps is expected to decline to \$2.4 billion in 2017, in part reflecting the rising competition from LEDs that will impact all lamp products. Additionally, 2012 represented an elevated base for fluorescent lamps, since CFLs and efficient T8 and T5 fluorescent lamps had already begun replacing less efficient products facing regulatory phase out, including T12 fluorescent types. While products like

CFLs will continue to benefit from EISA and related regulations through 2014, by 2017 many of the inefficient products will have been replaced, and the longer service lives of fluorescent lamps will restrain unit demand.

Through 2017, demand for high intensity discharge (HID) lamps is projected to increase 2.1 percent per year to \$2.2 billion. However, the market for HID lamps is expected to decline between 2017 and 2022, primarily due to the rising penetration levels of LED lighting in the outdoor market, which utilizes the most expensive high wattage HID lamps and will therefore cause especially dramatic declines in value terms.

Sample Text, Table & Chart

ELECTRICAL DISCHARGE LAMPS

High Intensity Discharge & Other Electrical Discharge

Demand for high intensity discharge (HID) and other electrical discharge lamps totaled \$1.2 billion in 2012, up just 1 percent from 2011. HID lamps accounted for 85 percent of overall lamp demand in 2012, up from 82 percent in 2011. Demand for HID lamps is expected to decline between 2017 and 2022. In part this reflects the fact that by 2017 the replacement of mercury vapor lamps will be essentially complete, thereby limiting opportunities to upgrade to other HID products. In addition, as the initial cost of LED lighting products for high wattage outdoor lighting declines and the longer term benefits (e.g., longer service life and lower energy costs) are proven, demand for LED lighting in outdoor market is expected to increase rapidly. This will negatively impact demand for both metal halide and sodium vapor lamps in this market. Because the outdoor market uses the most expensive high wattage lamps, the declining demand for HID lamps in this market will cause especially dramatic declines in value terms. Furthermore, the shifting mix of HID lamps sold will negatively impact the average sales price for the overall HID lamp market.

Demand for HID lamps is expected to decline between 2017 and 2022. In part this reflects the fact that by 2017 the replacement of mercury vapor lamps will be essentially complete, thereby limiting opportunities to upgrade to other HID products. In addition, as the initial cost of LED lighting products for high wattage outdoor lighting declines and the longer term benefits (e.g., longer service life and lower energy costs) are proven, demand for LED lighting in outdoor market is expected to increase rapidly. This will negatively impact demand for both metal halide and sodium vapor lamps in this market. Because the outdoor market uses the most expensive high wattage lamps, the declining demand for HID lamps in this market will cause especially dramatic declines in value terms. Furthermore, the shifting mix of HID lamps sold will negatively impact the average sales price for the overall HID lamp market.

Imports of HID and other discharge lamps accounted for 4 percent of demand in 2012, up sharply from 2002 levels. Going forward, imports of discharge lamps are expected to rise more rapidly than overall market, increasing their share, but remaining below 4 percent of demand.

**STUDY
COVERAGE**

This Freedonia study, **Lamps**, offers historical data (2002, 2007, 2012) plus forecasts for 2017 and 2022 for lamp demand by type and market. The study also details key market environment factors, examines the industry structure, evaluates company market share and profiles 32 competitors in the US lamp industry.

COMPANY PROFILES

National Cathode Corporation

210 Calming Water Trail
 Dallas, GA 30132
 770-529-
 http://w

Annual S
 Employ

Key Pro

Nat is a manufacturer of cold cathode lighting systems. The Company's products are primarily intended for commercial, residential, industrial, entertainment, gaming, assembly, and health care environments.

The Company's cold cathode lighting systems are available in such styles as NPF-6, NPF-12, and SS24 dimmable commercial use types, which are used with magnetic transformers. National Cathode makes HPB-1, HPB2, and HPB/SMART-STEP high power factor, non-dimmed models for use with magnetic ballast systems. Additionally, LST-1 and LST-2 normal power factor lamps are engineered for use with magnetic ballast systems. The Company's HPE-2012 and HPE/2027 95-watt (W) models, and HPED-10127 50-W lamps utilize electronic energy supplies. National Cathode's lamps are suitable for arch lighting, luminous ceilings and walls, skylights, pendants and custom fixtures, exposed and sculpture lighting, artwork lighting, stairs, walkways and ramps, cove lighting, glass backlighting, indoor pylons, elevator signals, custom signage, and a wide range of other uses.

National Cathode has US manufacturing operations in Seymour, Tennessee; and an assembly facility in Queens Village, New York.

LEDs & High Efficiency Lighting

US demand for high efficiency lighting will increase 10.4 percent annually to \$11.7 billion in 2017, driven by a ban on incandescent lamps. The market for light emitting diodes (LEDs) will nearly double in size as they supplant traditional lamps in nearly every major lighting segment, especially outdoor lighting, residential and nonresidential applications. This study analyzes the \$7.1 billion US high efficiency lighting industry, with forecasts for 2017 and 2022 by product, market and US region. The study also evaluates company market share and profiles industry players.
 #3068 November 2013 \$5300

World Lighting Fixtures

Global demand for lighting fixtures is projected to increase at a 6.9 percent annual rate through 2018 to \$176 billion. China will remain the largest while India grows the fastest. The dominant nonportable lighting fixture segment will experience the most rapid growth. The key construction market will grow the fastest. This study analyzes the \$126 billion world lighting fixture industry, with forecasts for 2018 and 2023 by product, market, world region, and for 20 countries. The study also evaluates company market share and profiles industry competitors.
 #3192 August 2014 \$6400

Lighting Fixtures

Demand for lighting fixtures in the US will rise 7.7 percent annually to \$32.5 billion in 2018. The dominant construction market will be the fastest growing segment, as it rebounds from the decline of the 2008-2013 period. Nonportable fixtures will remain the dominant product category and will grow rapidly, at a slightly faster annual rate than portable lighting. This study analyzes the \$22.4 billion US lighting fixture industry, with forecasts for 2018 and 2023 by product, market and US region. The study also evaluates company market share and profiles industry players.
 #3136 May 2014 \$5300

World Lighting: Lamps & LEDs

World demand for lighting is projected to climb more than 12 percent annually through 2016 to \$78.3 billion. Market gains in developing countries will outpace sales in the US, Western Europe, and Japan. LED (or solid state) lighting devices will record by far the fastest global market gains. This study analyzes the \$43.9 billion global industry for lamps and LEDs used in lighting applications, with forecasts for 2016 and 2021 by product, market, world region and for 18 countries. The study also evaluates company market share and profiles industry participants.
 #2979 January 2013 \$6200

About The Freedonia Group

The Freedonia Group, Inc., is a leading international industry market research company that provides its clients with information and analysis needed to make informed strategic decisions for their businesses. Studies help clients identify business opportunities, develop strategies, make investment decisions and evaluate opportunities and threats. Freedonia research is designed to deliver unbiased views and reliable outlooks to assist clients in making the right decisions. Freedonia capitalizes on the resources of its proprietary in-house research team of experienced economists, professional analysts, industry researchers and editorial groups. Freedonia covers a diverse group of industries throughout the United States, the emerging China market, and other world markets. Industries analyzed by Freedonia include:

- Chemicals • Plastics • Life Sciences • Packaging • Building Materials • Security & Electronics • Industrial Components & Equipment • Automotive & Transportation Equipment • Household Goods • Energy/Power Equipment

[Click here to learn more about Freedonia](#)

Freedonia Custom Research

Freedonia Custom Research delivers the same high quality, thorough and unbiased assessment of an industry or market as an industry study. Since the research initiative is based upon a company's specific needs, companies harness Freedonia's research capabilities and resources to answer unique questions. When you leverage the results of a Freedonia Custom Research engagement, you are able to obtain important answers to specific questions and issues associated with: mergers and acquisitions, new product launches/development, geographic expansion, entry into new markets, strategic business planning, and investment and funding decisions.

Freedonia Custom Research is ideal for companies seeking to make a strategic difference in the status quo and focus on future business growth. Working side by side with clients, Freedonia's team is able to define a research project that is custom-tailored to answer specific questions and provide the basis from which a company can make informed business decisions.
