Composites Overview

The contents of our World Composite Forecasts consist of tables that set forth historical and forecast series for:

- construction expenditures
- building construction expenditures
- residential building construction expenditures
- nonresidential building construction expenditures
- nonbuilding construction expenditures
- existing residential floor space
- new residential floor space
- housing stock
- single-family housing stock
- multifamily housing stock
- new housing units
- new single-family housing units
- new multifamily housing units.

Forecasts are generally made on a country-by-country basis. The series presented in this publication are developed by the Freedonia Group's economics department. These are the same series used by our industry analysts in the preparation of our various industry studies.

For each particular series, historical figures are presented for 2001, 2006 and 2011, and forecasts are provided for 2016 and 2021.

Unlike Freedonia's typical industry study, composites contain no text, so there is no narrative that explains the analysis behind the forecasts. However, an informative title describes the contents of each table. For a complete listing of the specific items contained in a particular table, please contact our Client Services Department at 1.800.927.5900 (US) or 440.684.9600 (international).

One can access the various series for a particular country or region by referring to Section XIV of the Forecasts, which provides Regional and Country Tables. One can access a series for a particular item in Sections I through XIII. In these Sections, series for a particular item (for example, housing stock) are presented for multiple countries within a particular region. Please refer to the sample tables in this brochure for examples of the form of presentation.

The economic series presented in this study were made as of June 2012.
